- 8 Preset Programmes

itouch plus

All the features of the
itouch easy, plus:

- Customized Settings
- Usage Diary
- Clock with Medication Alarms

TensCare™

TENS (Transcutaneous Nerve Stimulation) is an effective, medically recognized, method of pain relief. It stimulates the body's own defenses against pain by transmitting tiny impulses through the skin via reusable adhesive pads. The gentle signals attack your pain in two ways, either by helping the body to release endorphins, the body's natural painkillers, or by blocking the pain messages before they reach the brain.

itouch easy Features:

- **One Touch Memory Start™**
At the touch of only ONE button, the i-touch remembers and returns to the last settings. It gently ramps up to around 75% of the last intensity level used, taking into account the natural tolerance that the body may have built up.
- **Comfort Strength control**
Gives a known and reproducible stimulation. CSC monitors skin and electrode pad resistance and adjusts the output to maintain a constant current, which is linked to intensity steps on 0.5mA, for maximum comfort.
- **2 in 1 Lead Connection**
Unique single plug connection for both channels, simplifying lead connection and management during use.
- **8 medically proven programs**
- **2 year unit guarantee**

CE | FDA
0473 | Worldwide Distribution.

itouch easy Features:

All the features of the "easy"... PLUS

- **Customized Settings**
Choice of a wide range of settings with the ability to store and remember the selection.
- **Usage Diary**
Facility that remembers how long, and at what strength, the unit has been used in each setting.
- **24 Hour Clock**
- **3 Daily Alarm Settings**
Which can be used as medication reminders.

WARNING:

Do not use TENS on undiagnosed pain
Do not use with a heart pacemaker
Do not use on the abdomen
during pregnancy
